

# Car Top Handrail

## Product Description

- > Handrail assembly installed to the top of the cab/ canopy to provide a safer work area while servicing equipment on the car top.
- > When used with EMS cabs, the canopy has predrilled flanges for simple installation.
- > Required on all sides of the car canopy where the distance between the car canopy and adjacent hoistway wall is greater than 12".

## Standard Features

- > Rigid tubular construction.
- > Continuous hole spacing for flexibility during installation to work around equipment.
- > Brackets are supplied to assist with installation to the canopy of the cab.
- > Toe kick is provided for installation at the work surface level.
- > All materials come pre-finished with either plated or powder coat finishes.
- > Horizontal bracing is included for attachment to the car sling for added stability.

*Car Top Handrail Option*
